

Steven Cavagna has rudely played around with the material, using the Plasma cutting technique to manually drill a steel plate. The result is a series of irregularities in the metal created by these holes and the burn marks, giving it its significant and unmistakable character.

Brem makes it using the B'A panel.

Technical data B'A Panels page II

Panels: BREM'ART

The Brem'Art panels are built with a thickness of only 2,3cm. The valves can be hidden thanks to the higher cover.

The connections behind the cover allow the thermostatic head, partially visible, to operate by detecting the room temperature.

The electric version is produced with heights 180 and 200 cm and a protrusion of only 5.8 cm because of electrical devices.
